Security Policy

The security of your information is vital to us at XENO PORTFOLIO.

We expect the requirements and requests of our clients by giving a protected and dependable stage for the assortment of all application information. The security of your information is vital to us at XENO PORTFOLIO. We expect the requirements and requests of our clients by giving a protected and dependable stage for the assortment of review information.

XENO PORTFOLIO servers containing client or PII information are completely facilitated in a safe area at the Moscow, Russia. This office gives an incredibly elevated degree of activity security, including all day, every day on location security, repetitive power sources, and seismic redesigns - all of which keep our server foundation completely safe. All expostulated hard drives are conveyed to an outsider computerized information.

Our servers are all likewise safeguarded by superior exhibition checked firewalls, which incorporate various failover frameworks and repetitive equipment in the event of equipment disappointment. Our frameworks are tried for weaknesses consistently, and complete robotized reinforcements are performed daily.

XENO PORTFOLIO utilizes Transport Layer Security (TLS) encryption, all the more generally known as HTTPS, for each of the information that we send and get. This guarantees that all client information on the way is both free from any potential harm, and furthermore simply accessible to the planned beneficiaries.

Also, we keep up with that YOU own the entirety of your information and we don't and won't at any point trade, offer or sell that information with any outsiders.

It is fundamental that we keep your information no problem at all, and assuming you have any inquiries concerning information security if it's not too much trouble, contact XENO PORTFOLIO Support.
